T14327
alpha-latrotoxin receptor 3, calcium-independent - rat
N;Alternate names: G-protein coupled receptor
C;Species: Rattus norvegicus (Norway rat)
C;Accession: T14327
R;Ichtchenko, K.A.; Bittner, M.A.; Krasnoperov, V.; Little, A.R.; Chepurny, O.;
J, Biol. Chem. 274, 5491-5498, 1999
A;Title: A novel ubiquitously expressed alpha-latrotoxin receptor is a member of A;Reference number: Z17983; MUID:99150330; PMID:10026162
A;Accession: T14327
A;Accession: T14327
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Molecule type: mRNA
A;Residues: 1-1550 <ICH>
A;Cross-references: EMBL:AF063103; NID:g3882980; PID:g3882981; PIDN:AAC77816.1
C;Genetics:
A;Gene: CIRL-3
C;Superfamily: alpha-latrotoxin receptor, calcium-independent

T17199

CL3BB protein - rat

C;Specles: Rattus norvegicus (Norway rat)
C;Date: 15-Oct-1999 #sequence_revision 15-Oct-1999 #text_change 04-Mar-2000
C;Accession: T17199
R;Sugita, S; Ichtchenko, K.; Khvotchev, M.; Sudhof, T.C.
submitted to the EMBL Data Library, July 1998
A;Description: CL family.
A;Reference number: Z18712
A;Accession: T17199
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Molecule type: mRNA
A;Residues: 1-1298 <SUG>
A;Cross-references: EMBL:AF081158; NID:g3695142; PID:g3695143; PIDN:AAC62664.1
C;Superfamily: alpha-latrotoxin receptor, calcium-independent

TISSUE SPECIFICITY: IN MACROPHAGES; BUT ABSENT FROM THOSE WHICH
ARE LOCALIZED WITHIN T-CELL AREAS OF LYMPH HODES AND SPLEEN.
LOW LEVEL OF EXPRESSION ON BLOOD MONOCYTES.
SIMILARITY: CONTAINS 7 EGF-LIKE DOMAINS.
SIMILARITY: BELONGS TO FAMILY 2 OF G-PROTEIN COUPLED RECEPTORS
SIMILARITY: CONTAINS 1 GPS DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AND

SUBCELLULAR LOCATION: Integral membrane protein
TISSUE SPECIFICITY: WIDE EXPRESSION; INCREASED
PERIPHERAL BLOOD MONONUCLEAR CELLS.
PTM: N- AND O-GLYCOSYLATED; (POSSTBLE).
SIMILARITY: CONTAINS 6 EGF-LIKE DOMAINS.
SIMILARITY: BELONGS TO FAMILY 2 OF G-PROTEIN CO
SIMILARITY: CONTAINS 1 GPS DOMAIN.

-i-TISSUE SPECIFICITY: Expressed in the brain, where it is localized principally in the ependymal cell layer, choroid plexus and the area postrema. Also found in spinal chord and in the eye.

-i-SIMILARITY: BELONGS TO FAMILY 2 OF G-PROTEIN COUPLED RECEPTORS.
-i-SIMILARITY: CONTAINS 9 CADHERIN DOMAINS.
-i-SIMILARITY: CONTAINS 8 EGF-LIKE DOMAINS.
-i-SIMILARITY: CONTAINS 1 LAMININ G-LIKE DOMAIN.
-i-SIMILARITY: CONTAINS 1 LAMININ EGF-LIKE DOMAIN.
-i-SIMILARITY: CONTAINS 1 GPS DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           InterPro;

Dev. 112:157-160(2002).
-i- FUNCTION: Receptor that may have an important role in cell/cell
-i- signaling during nervous system formation.
-i- SUBCELLULAR LOCATION: Integral membrane protein.
-i- DEVELOPMENTAL STAGE: First detected at E6. Predominantly expressed
                                                                                                                                                                                                                                                                                                                                                                                    Pfam; PF00054; laminin_G; PRINTS; PR00205; CADHERIN.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       in the developing CNS, the emerging dorsal root ganglia and cranial ganglia. In the CNS, expression is uniform along the rostrocaudal axis. During gastrulation, it is expressed in the vicinity of the primitive streak, and becomes predominant in that area at late gastrulation. At E10, detected in ventricular zones (VZ), but not in marginal zones (MZ), and weakly in other structures. Between E12 and E15, a high expression is present in the VZ in all brain areas. No expression in differenciated neuronal fields. In the newborn and postnatal stages, expression remains restricted to the VZ. Also found weakly in fetal lungs, reference of the value of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MGI:1100883; p00749; 1URI
